

Quality Improvement—Improved with R

Mara Alexeev, MD, MPH

Boston Children's Hospital, Department of Pediatrics

Clinical Fellow, Harvard Medical School

Created Spring 2021: Last updated May 18, 2021

Workshop Website

These slides are intentionally bland to be amenable for printed materials.

To view the slides in fancier formatting go to the [workshop's website](#).¹

All the workshop materials are available on [Github](#).²

The RStudio Cloud materials are available [here](#).³

¹https://maraalexeev.github.io/R_for_Clinical_Informatics/

²https://github.com/MaraAlexeev/R_for_Clinical_Informatics#r-for-clinical-informatics

³<https://rstudio.cloud/project/2465874>

Why should I come to this workshop?

For those who don't know anything about R

- ▶ Learn how your organization can use R
- ▶ Write your first R code!
- ▶ See some highlights of the R ecosystem

Why should I come to this workshop?

For the beginner R user

- ▶ See start-to-finish project management in R
- ▶ Make some gorgeous plots!
- ▶ Get super excited about next steps in your learning process
- ▶ Make R friends
- ▶ Python users welcome too!

Why should I come to this workshop?

For the more advanced R user

- ▶ There is extra bonus material available for the advanced user!
- ▶ Hear how to expand the use of R in your organization
- ▶ Be a cheerleader to folks learning about R
- ▶ Meet other people in Clinical Informatics using R

Wait!?! What about QI?

I didn't forget about quality improvement!

The materials we will go through as we play with R are focused around a simulated quality improvement project to help spark your imagination about how you could use R in your work from project conception to analysis and publication.

Pre-Workshop Preparation

To Know

The workshop will be held on Zoom.

To Do

You'll need the following during the workshop:

- ▶ A computer with internet connection
- ▶ A supported browser⁴
- ▶ An RStudio Cloud account—**free**

⁴<https://support.rstudio.com/hc/en-us/articles/227449447-Supported-browsers-for-RStudio-Connect>

Extras

If you would like to some additional preparation for the workshop, I recommend the following:

- ▶ Learn about [Markdown](#) in 10 minutes!
- ▶ Sign up for a [Github](#) Account—***free***

Schedule

Introduction ~30 minutes

Systems check ~15 minutes

Play ~30 minutes

Wrap Up and Discussion ~20 minutes

What is R?

It's a programming language.

It's software.

It's free!

Why is R amazing?

You can run it locally.

You can run it in the cloud.

You can run it on a high performance computing cluster!

There's a great community around the world using R!!

Why should you add R to your workflow

You can reproduce your work.

You can share every step of your analysis.

You can reuse your code for many projects!

You can use **other's** code for many projects!

What does R look like

```
# Text after a hash is a comment  
# It is not run by the computer  
# Can be used as notes to you (or future you!)
```

```
# Here are a few simple calculations
```

```
1 + 1
```

```
## [1] 2
```

```
2 * 3
```

```
## [1] 6
```

```
4^2
```

```
## [1] 16
```

Text

You can manipulate strings of text.

```
host <- "Mara"

greeting <- "Hello World"

paste0(greeting, " from ", host, "!")

## [1] "Hello World from Mara!"
```

You can import data easily

- ▶ Excel
- ▶ Google Sheets
- ▶ SAS
- ▶ SPSS
- ▶ Stata
- ▶ Lot's more

Here's some data in Excel

You might have data like this?

How do you get it into R?

	A	B	C	D
1	count	time	resident	factor_servic
2	1	16.225	Pediatrics	0.55
3	2	15.675	Pediatrics	0.55
4	3	16.225	Pediatrics	0.55
5	4	11.55	Pediatrics	0.55
6	5	5.775	Pediatrics	0.55
7	6	12.375	Pediatrics	0.55
8	7	6.325	Pediatrics	0.55
9	8	4.33125	Pediatrics	0.55
10	9	8.830556	Pediatrics	0.55
11	10	8.415	Pediatrics	0.55
12	1	54.175	Pediatrics	0.55
13	2	31.35	Pediatrics	0.55

Data Import Examples

Like this!

```
#From Excel
```

```
fake_data <-  
  read_excel("./data/qi_spreadsheet_workshop.xlsx",  
    sheet = "scatter")
```

Tables

You can make tables from your data.

Table 1: Recreating booktabs style table

count	time	resident	factor_service
1	16.225	Pediatrics	0.55
2	15.675	Pediatrics	0.55
3	16.225	Pediatrics	0.55
4	11.550	Pediatrics	0.55
5	5.775	Pediatrics	0.55

Tables, behind the curtains

How did I make that table??

```
head(fake_data, 5) %>%  
  kable(caption = "Recreating booktabs style table",  
        format = "latex",  
        booktabs = T) %>%  
  kable_classic(full_width = F, html_font = "Cambria")
```

Table 2: Recreating booktabs style table

count	time	resident	factor_service
1	16.225	Pediatrics	0.55
2	15.675	Pediatrics	0.55
3	16.225	Pediatrics	0.55
4	11.550	Pediatrics	0.55
5	5.775	Pediatrics	0.55

Plots, simple

You can make plots.

Plots, statistics

You can make plots—with statistical overlay.

What a graph!?!

Really swell

This data is simulated

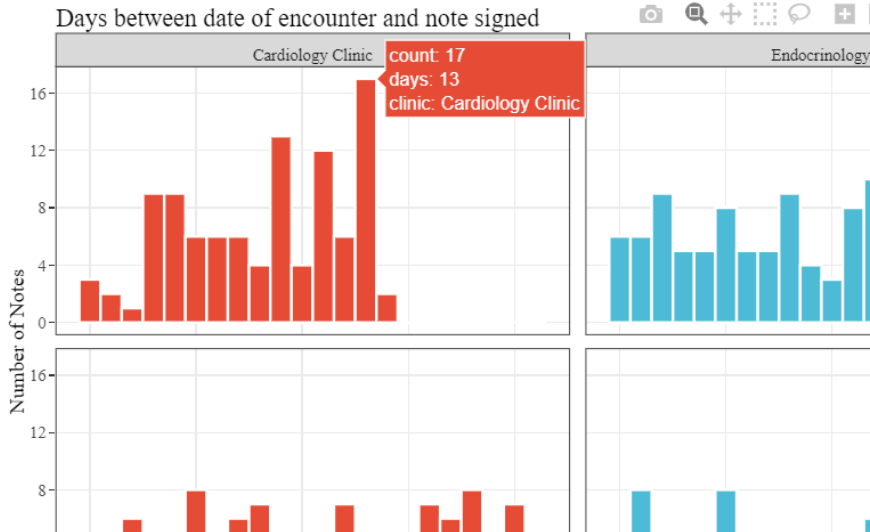

Plots, fancier

Days between date of encounter and note signed
Adult Patients at XYZ Campus

Plots, interactive

Not interactive here because this is a PDF! But here's a picture.
The code to transform the plot is a single function `ggplotly()`!

Code + Text + Figures

With R you can create documents in different formats:

- ▶ Word
- ▶ PDF
- ▶ Slides
- ▶ Websites
- ▶ Blogs
- ▶ Books
- ▶ PNG/JPEG
- ▶ And more!!

ggplot2: Elegant Graphics for Data Analysis

Table of contents

Welcome

Preface to the third edition

Preface to the second edition

Getting started

1 **Introduction**

2 First steps

Layers

Introduction

3 Individual geoms

Other amazing things

You can mix programming languages together

- ▶ R and Python
- ▶ R and Python and SQL
- ▶ R and Python and SQL and Bash
- ▶ ...

R is flexible!

- ▶ You use R from start to finish with a project
- ▶ You can use it for a single part of your project—eg making plots.
- ▶ You can use it alongside other software like Tableau and REDCap

People know R, or want to!

- ▶ You could hire someone to do R work for you in a day.
- ▶ You probably already have folks at your institution who are R pros!
- ▶ People can upskill and learn R!

Your turn now!

Systems Check

- ▶ Log into Rstudio Cloud
- ▶ If you don't have a link to the materials, message Mara directly in the Zoom chat with your email
- ▶ Raise hand in zoom if you are having trouble
- ▶ Take this [survey](#)
- ▶ If you are an advanced user, open up the `QI_playground.Rmd` and start playing around

Open up the project

RStudio Cloud

For this workshop we will be using RStudio Cloud.

Why? Because there is nothing that you need to download!

You don't **need** to use RStudio to use R, but I do!

RStudio on your computer and RStudio Cloud look very similar.

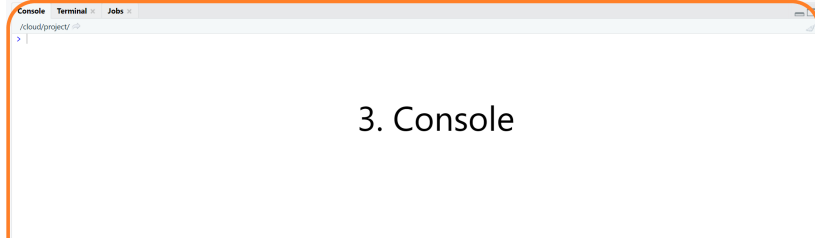

R and RStudio are free to download to your computer.

RStudio Orientation: Basics

≡ Your Workspace / CIC_2021_QI_R_Workshop

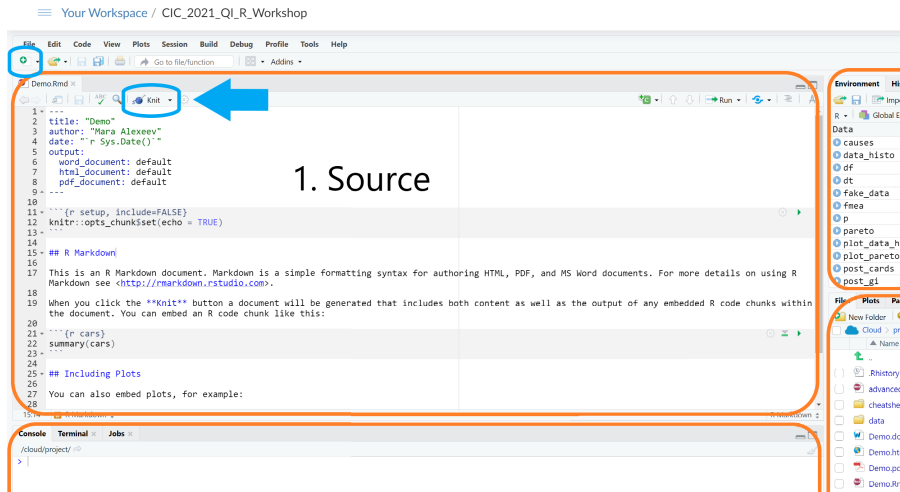

```
1 ---
2 title: "Demo"
3 author: "Mara Alexeev"
4 date: "r Sys.Date()"
5 output:
6   word_document: default
7   html_document: default
8   pdf_document: default
9 ---
10
11 ```{r setup, include=FALSE}
12 knitr::opts_chunk$set(echo = TRUE)
13 ```
14
15 ## R Markdown
16
17 This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R
18 Markdown see <http://rmarkdown.rstudio.com>.
19
20 When you click the Knit button a document will be generated that includes both content as well as the output of any embedded R code chunks within
21 the document. You can embed an R code chunk like this:
22
23 ```{r cars}
24 summary(cars)
25 ```
26
27 ## Including Plots
28
29 You can also embed plots, for example:
```

```
> |
```

RStudio Orientation: Knit

To knit something in R means to transform it from the raw text and code into a nice output like a PDF or slides. One source material can be knit into many different outputs—from the same source I might make a website, a word document, or a set of slides.

RStudio Orientation: Create a New File

Click there to make a new file.

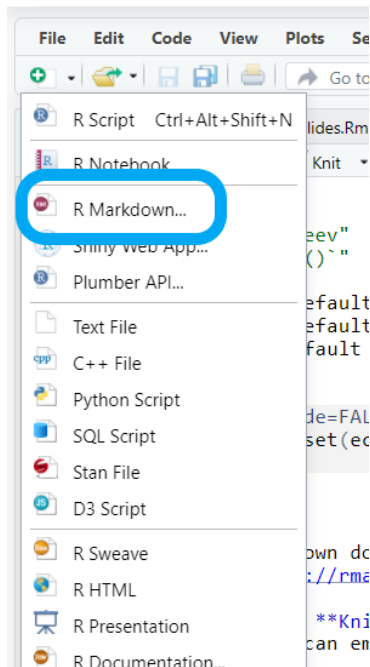

≡ Your Workspace / CIC_2021_Q1_R_Workshop

The screenshot displays the RStudio IDE interface. The top menu bar includes File, Edit, Code, View, Plots, Session, Build, Debug, Profile, Tools, and Help. The 'File' menu is open, and the 'New File' button (represented by a blue circle with a plus sign) is highlighted by a blue arrow. The 'Code' editor shows a file named 'Demo.Rmd' with R Markdown content. The text '1. Source' is overlaid on the code editor. The right-hand side of the interface features the 'Environment' pane, which lists variables in the current environment, and the 'Plots' pane, which shows a list of plots. The bottom of the interface shows the 'Console' pane, which displays the command prompt and the current directory path '/cloud/project/'. The text '3. Console' is overlaid on the console area.

3. Console

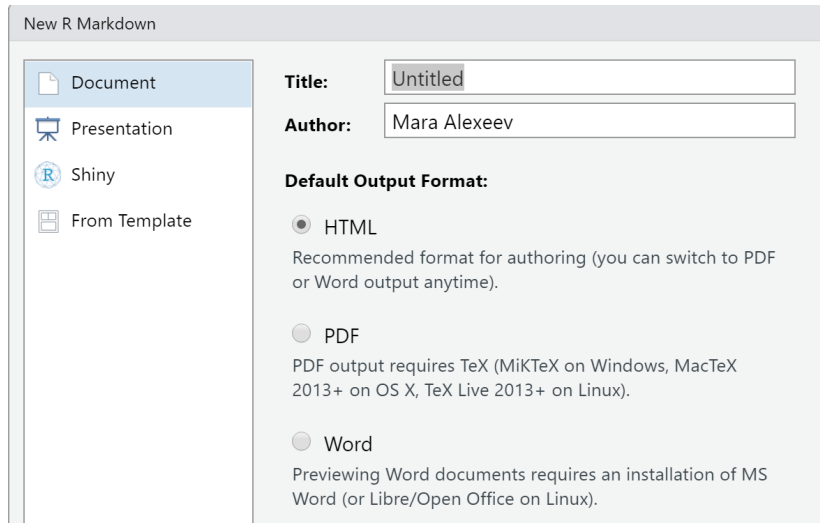

RStudio Orientation: Select R Markdown

Make an R Markdown Document!!

After you have selected R Markdown, you will get a pop up like below.

Title it Hello World! Hit “OK”

The image shows a dialog box titled "New R Markdown". On the left is a sidebar with four options: "Document" (selected), "Presentation", "Shiny", and "From Template". Each option has a small icon. On the right, there are two text input fields: "Title:" with the text "Untitled" and "Author:" with the text "Mara Alexeev". Below these is a section titled "Default Output Format:" with three radio button options: "HTML" (selected), "PDF", and "Word". Each option has a descriptive text block below it.

New R Markdown

Document

Presentation

Shiny

From Template

Title:

Author:

Default Output Format:

☒ **HTML**

Recommended format for authoring (you can switch to PDF or Word output anytime).

☐ **PDF**

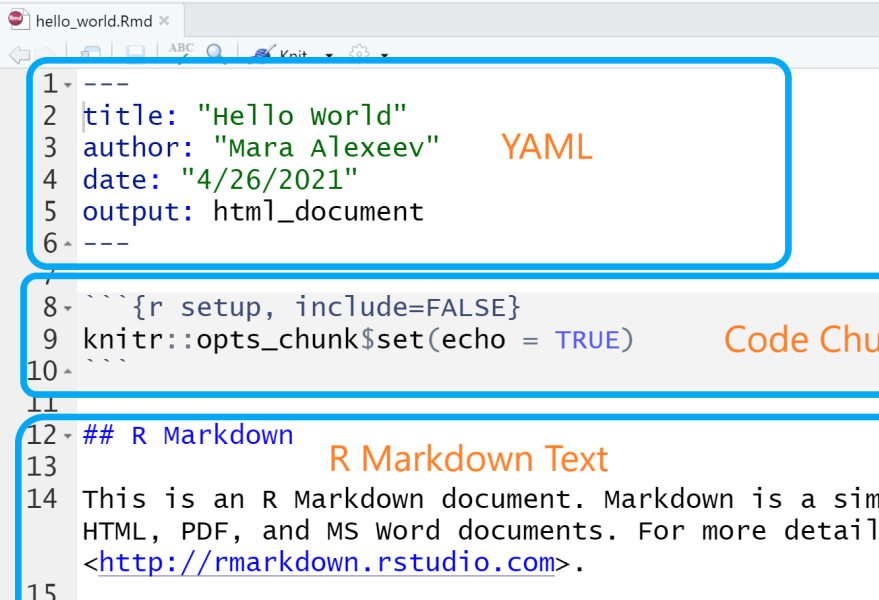

PDF output requires TeX (MiKTeX on Windows, MacTeX 2013+ on OS X, TeX Live 2013+ on Linux).

☐ **Word**

Previewing Word documents requires an installation of MS Word (or Libre/Open Office on Linux).

View the Rmd

Your new file should look something like this.

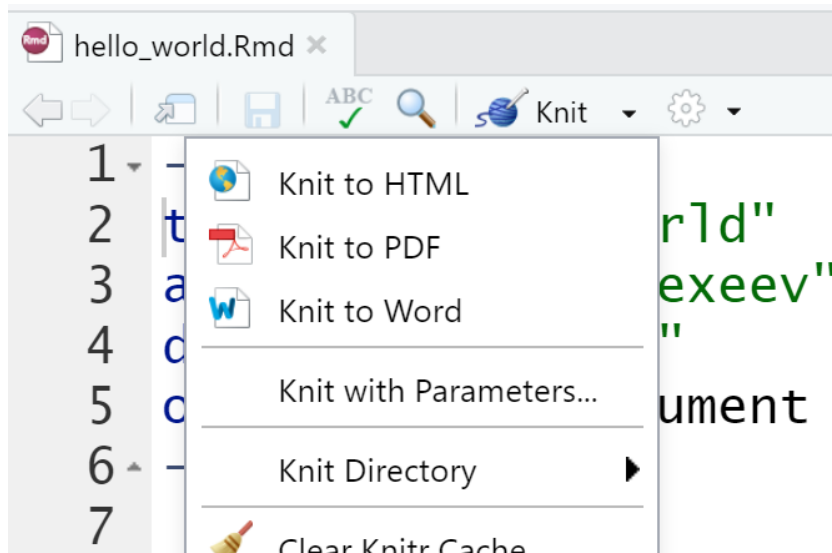

```
1 ---
2 title: "Hello world"
3 author: "Mara Alexeev"
4 date: "4/26/2021"
5 output: html_document
6 ---
7
8 ```{r setup, include=FALSE}
9 knitr::opts_chunk$set(echo = TRUE)
10 ```
11
12 ## R Markdown
13
14 This is an R Markdown document. Markdown is a simple
15 HTML, PDF, and MS word documents. For more details
16 <http://rmarkdown.rstudio.com>.
```

Rmd—What does it all mean?!?

An Rmd file allows you to mix code and text in a single document.

You can then knit an Rmd file to many different outputs.

YAML

The YAML header contains the special instructions on how to create the output document. We won't do much with it here today, but it is a very powerful way to make your Rmd file as bespoke as you want it!

Code Chunks

Code chunks are where the code will go.

Code chunks have a gray background.

```
#This is a code chunk!  
#Here is a simple calculation  
1 + 2
```

```
## [1] 3
```

You can run a code chunk by pressing the green play button.

```
480  
481 ▾ ```{r code_chunk, echo=TRUE}  
482   #This is a code chunk!  
483   #Text that is after a hash on a line is  
484  
485   1 + 2  
486  
487 ▴ ```
```

Text

The text areas are the white background areas below the YAML header.

You can use R Markdown syntax to generate rich text formatting from simple symbols like the examples below.

Syntax

Plain text

End a line with two spaces
to start a new paragraph.

italics and *_italics_*

****bold**** and **__bold__**

superscript^{^2^}

~~~~strikethrough~~~~

# Knit that R Markdown Document!!

Press the knit button.

You'll be asked to save the file; name it `hello_world`

The screenshot shows the RStudio IDE interface. The top menu bar includes File, Edit, Code, View, Plots, Session, Build, Debug, Profile, Tools, and Help. The toolbar contains icons for opening files, saving, and running code. The main editor window displays an R Markdown document titled "Demo.Rmd". The document content includes a YAML header with title, author, and date, followed by an output section with default settings for word, html, and pdf documents. The body of the document contains a paragraph about R Markdown, an R code chunk for summarizing cars, and a section for including plots. A blue arrow points to the "Knit" button in the toolbar. The bottom panel shows the console with the command `/cloud/project/`.

## Hello World

Mara Alexeev

4/26/2021

## R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
summary(cars)
```

```
##      speed      dist
##  Min.   : 4.0    Min.   :  2.00
##  1st Qu.:12.0    1st Qu.: 26.00
##  Median :15.0    Median : 36.00
##  Mean   :15.4    Mean   : 42.98
##  3rd Qu.:19.0    3rd Qu.: 56.00
##  Max.   :25.0    Max.   :120.00
```

## Including Plots

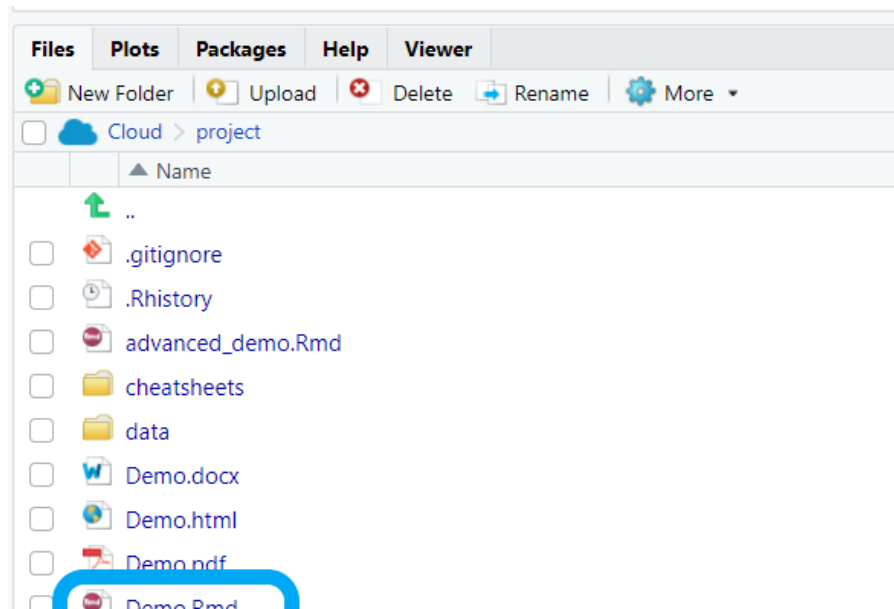

You can also embed plots, for example:

Congratulations!

## Let's start the Demo

Go to your file pane. Open the Demo.Rmd file.

Play!

# Live Demo

During the workshop we will work through the Demo.Rmd.

Ask questions in the Zoom chat or raise your hand.<sup>5</sup>

---

<sup>5</sup>Your Zoom hand!

## Finally, the QI!

After finishing up the Demo.Rmd, we will move on to the QI part.  
Finally!

Open the QI\_playground.Rmd file
